

MODIFICATION USER INSTRUCTIONS

Netgear Nighthawk M5 MR5200G Router Modification Instructions:

Warranty Notes:

- This modification voids all warranty rights with manufacturer and therefore shall not be returnable under warranty to the manufacturer.
- Do not open the unit once modified, doing so may damage the new antenna outputs. Any attempt to open the unit causing damage to the outputs are a chargeable repair.

Antenna notes:

- The internal antennas WILL still function without the external antennas connected.

5G SA/NSA

- SA (Stand-Alone) means the mast and router are capable of negotiating a link without needing a 4G connection first, the router must be SA capable, and the mast must have its own dedicated 5G infrastructure "SA" not dependant on 4G.
- NSA (None Stand-Alone) means the router and the mast must negotiate a 4G link before it can establish its 5G link. Once connected to 5G it will still require the 4G link to maintain the 5G connection.

Software Configuration:

- There has been No firmware/software adaptations to the router during the modification process.
- During testing of the modification, the router will have been restored to factory default setting, any setting that were previously on the unit have been lost.

This modification will allow the use of the new external inputs in any of the below configurations.
